Acute and Long Term Care COVID-19 Highlights – Winnipeg

Latest update will appear in blue

Where the term patient is used throughout this document, it shall be interpreted as referring to patient, resident or client unless explicitly stated otherwise.

Contact Site IPC/Designate
For ALL ADMITTED suspected or confirmed cases report to site Infection Control Professional or designate. After hours leave a voice message for follow up and if urgent, contact IP&C designate:
- Children’s Hospital - Pediatric ID: 204-787-2071
- St. Boniface Hospital – Dr. Evelyn Lo: 204-237-2053
- HSC and all other sites - Dr. John Embil: 204-787-2071

INFECTION PREVENTION & CONTROL MEASURES
Testing is recommended for all new admissions and readmissions, except those patients/residents who have tested positive for COVID-19 within the last 90 days.

</table>

*Fully vaccinated individuals are those who have received both doses (any combination) of an approved two-dose COVID-19 vaccine (AstraZeneca, Pfizer, Moderna), OR a single dose of an approved single dose COVID-19 vaccine (Janssen/Johnson & Johnson) with more than 14 days having passed since the second dose (or approved sole dose) was received.

** if 1 Category B symptom – implement Droplet/Contact Precautions. If AGMP, per Shared Health protocol. Test for COVID-19.

Source Control
- Signage at entrances
- Hand hygiene (HH) and respiratory etiquette
- Apply medical mask on patient and accompanying persons immediately
- Separate waiting areas for persons with potential infection if unable to immediately isolate

Additional Precautions & Personal Protective Equipment (PPE)
- Enhanced Droplet/Contact Precautions for COVID-19 Suspect and Positive patients
- Post appropriate signage on room door
- Implement Personal Protective Equipment Supply Management and Stewardship Planning and Guidance Framework principles and recommendations as appropriate for setting and services provided
- Dedicate patient equipment. If not able to dedicate, clean/disinfect after use

Patient Accommodation
- Single room. If cohorting necessary, consult IP&C; only possible for COVID-positive, including variants of concern (VOC)
- For AGMPs if no AIIR, close door to single room

Testing
- Collect 1 nasopharyngeal (NP) swab placed in viral transport medium or NP aspirate in addition to routine investigations; video https://vimeo.com/398627117/e35232c036
- Include travel history or other relevant screening criteria, relevant symptoms, and request for COVID-19 on requisition. Clearly identify on the requisition if the patient is a healthcare worker/first responder, and/or an inpatient, transport worker (e.g. bus driver, trucker, rail worker, airline personnel, etc.), or childcare/education worker
- More severely ill patients may also require deep lung specimens be submitted, such as sputum, ETT secretions or broncho-alveolar lavage specimens

Patient Transport
- Transport out of the isolation room for medically essential purposes only
- Notify Patient Transport Services and receiving department regarding Additional Precautions required in advance of transport
- Patient applies medical mask and performs Hand Hygiene

Patient Items
- Ensure items dropped off for patients are dedicated to the intended patient only and not shared amongst patients
- Newspapers and books are allowed but must be single-use for Orange and Red zones
  - Green Zones: if not possible to achieve single use, reuse no sooner than the following day may be considered if not visibly soiled, and if stored at least overnight in a clean, dry, and secure space (without being handled during that time)
- Ensure hand hygiene before and after interaction with items

Contact Tracing
- Refer to Updated IP&C COVID-19 Contact Management in Acute and Long-Term Care

August 18, 2021
### Change tracker:
- **Aug. 18, 2021:** Added clarification re: 1 category B symptom; LTC and Acute combined into one document; duration of precautions updated; screening criteria updated; fully vaccinated info added.
- **Feb. 18, 2021:** Changed definition of prolonged exposure from 15 minutes to 10 minutes.
- **Jan. 29, 2021:** Updated exposure criteria to include travel to anywhere outside Manitoba.

### Management
- **Facilities algorithm and COVID-19 Low Risk Contact Management in Acute and Long Term Care Facilities**

### Discontinuation of Precautions
#### COVID POSITIVE
- To discontinue precautions for a patient who is COVID-19 positive consult IP&C/designate. 10 days from symptom onset and 72 hours while asymptomatic must have passed, whichever is longer.
- If client is in the ICU, was in the ICU and/or required Optiflow – refer to SDP for further guidance.
- Where patients with confirmed COVID-19 infection have been cohorted and one has recovered, this patient may be moved into the Green Zone as required.

#### COVID SUSPECT
- To discontinue precautions for an asymptomatic COVID-19 suspect patient with known exposure history consult IP&C/designate. If symptoms develop, collect specimen. If positive, follow protocols for positive patient management (10 days from symptom onset and 72 hours while asymptomatic). If negative, continue to isolate for the remainder of the 14 days and until symptoms resolve.
- Where there are negative COVID-19 test results in a patient that does not meet the ‘exposure’ criteria or ‘History’ criteria (see sections above) in patients with respiratory symptoms:
  - Consult IP&C/designate. Patient management may be adjusted to follow seasonal viral respiratory management protocols (i.e., droplet/contact precautions and discontinuation of precautions when symptom(s) resolve)
  - Decisions are based on relevant epidemiological data (i.e., known COVID-19 case(s) in a facility, community or congregate/work setting, or outbreaks). Those with known exposure history (contact, travel, or lab exposure) would not change additional precautions, regardless of swab results.

### Discharge
- **Discharge COVID-19 Positive**
  - COVID-19 positive patients may be discharged home positive. Refer to the WRHA COVID-19 Discharge Package:
    - [COVID-19 Staff Discharge Planning Self-Isolation Assessment](https://www.wrha.mb.ca/mediacentre/healthtopics/COVID-19/Staff-Discharge-Planning-Self-Isolation-Assessment)
    - [COVID-19 Discharge Form](https://www.wrha.mb.ca/mediacentre/healthtopics/COVID-19/Discharge-Form)
    - [COVID-19 Caregiver Discharge Instructions](https://www.wrha.mb.ca/mediacentre/healthtopics/COVID-19/Caregiver-Discharge-Instructions)
    - [COVID-19 Patient Discharge Instructions](https://www.wrha.mb.ca/mediacentre/healthtopics/COVID-19/Patient-Discharge-Instructions)
- Follow [Discharge Transport - COVID-19 Positive or Suspect (Acute Care)](https://www.wrha.mb.ca/mediacentre/healthtopics/COVID-19/Discharge-Transport)

- **Discharge COVID-19 Suspect**
  - Refer to: [COVID Testing – Updated Guidance for Individuals Awaiting Results](https://www.gov.mb.ca/health/covid-19/testing.html)
  - For exposed suspects notify Public Health: Fax Covid-19 Daily Patient/Resident/Client Screening Tool to Public Health
  - Follow [Discharge Transport - COVID-19 Positive or Suspect (Acute Care)](https://www.wrha.mb.ca/mediacentre/healthtopics/COVID-19/Discharge-Transport) processes for patients who are COVID positive or suspect.

### Visitor Management
- Visitor access is limited. Explore alternate mechanisms for interactions between patients and other individuals (e.g., video call on cell phones or tablets)
- Follow Shared Health visitation principles
- Visitor exceptions must be approved by site and/or regional leadership based on guidance provided by incident command:
  - For guidance on restrictions for Long Term Care settings, please see [https://sharedhealthmb.ca/files/covid-19-pch-visitation-principles.pdf](https://sharedhealthmb.ca/files/covid-19-pch-visitation-principles.pdf)
- In the select situations where visitation is approved, visitors must be screened for COVID-19 risk factors upon entry each time they attend a facility
- Visitors must follow hand hygiene, physical distancing, respiratory hygiene, and PPE recommendations as outlined
- Screen and manage visitors as a suspect if they have signs and symptoms and/or exposure criteria consistent with COVID-19 infection
- Instruct visitors to speak with a nurse or physician before entering the room to assess risk to the visitor’s health and ability to adhere to Routine Practices and Additional Precautions
- Provide visitors with instructions on and supervision with appropriate use of PPE for Enhanced Droplet/Contact precautions; visitors should not be present during AGMPs

### Physical Distancing
To try to stop progression of virus transmission:
- Limit close contact (within six feet/two metres)
- Avoid greetings that involve touching, including handshakes and hugs
- Frequent disinfection of regularly used surfaces, electronics and other personal belongings
