Do you have any of the following symptoms:

- Fever (greater than 38 degrees Celsius)?
- “New” onset of (or exacerbation of chronic) cough?
- Shortness of breath?
- Difficulty breathing?
- Sore throat?
- Runny nose?
- Headaches?
- Malaise?
In the past 14 days have you:

Have you had close contact (within 2 metres/6 feet) with a confirmed case of COVID-19, while not wearing recommended PPE and/or not practicing social distancing?  
(Example: This patient would be wearing a mask if confirmed or probable when you were at work.)  
(NOTE: This also includes attendance at large group settings where someone has been confirmed to have COVID-19 and you were notified by Public Health)

Had laboratory exposure working directly with biological specimens that contain COVID-19?

Do you live with or have you had close contact (within 2 metres/6 feet) with someone who is ill with fever and/or cough and ILI symptoms, while not practicing social distancing at home?  
(Example: Difficult to distance from a two year old, compared to caring for a 17 year old child who can isolate within the home. Need to explore each situation and use clinical judgement.)
